Description

I built my project in order to help grow my wife's startup company, Auntie Liz, LLC. The application is used to inform clients about her business, connect with her, and to easily schedule appointments.

Features

- Clients have the opportunity to schedule an appointment from a list of available times and dates. The appointment is then scheduled to their Google Calendar as well as the owner's Google Calendar.
- First time clients can fill out a New Client Form and submit that information to a database.
- Clients can email the owner directly from the website

Planning - User Stories

- Users can easily gather information about Auntie Liz, LLC
- Users can schedule an appointment that syncs to their Google Calendar and the owner's Google Calendar
- Users can email the owner directly from the web page
- New users can submit a new client form
- Users can view the website in a mobile-friendly format

Planning - Database

Customer Table

- First Name
- Last Name
- Email
- Phone Number
- Etc.

Technology Stack

- Java
- Spring Boot
- Thymeleaf
- MySQL/ClearDB
- Bootstrap
- Hibernate

Demo

https://www.auntielizllc.org/

What I Learned

- Spring Boot
- Making a responsive website
- Collecting data from a form
- Deploying an application and connecting to a domain management system

What's Next

- Transform MySQL/ClearDB data into a readable format for the owner
- Learn ReactJS
- Learn basic computer science concepts
